

# Argos Copy Tracking

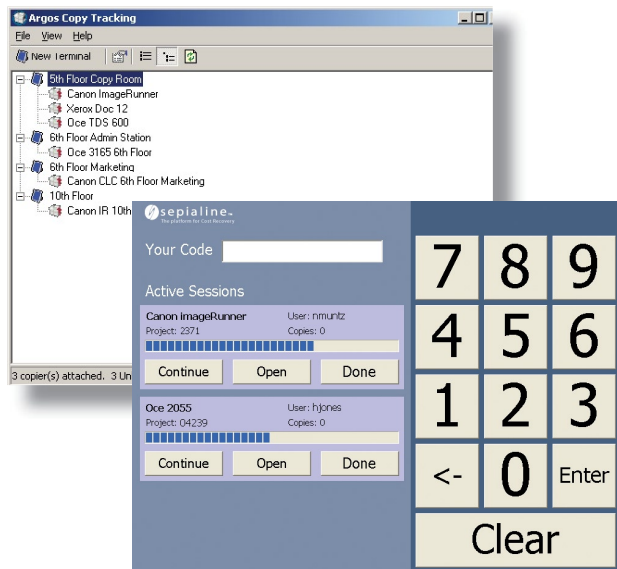

“Sepialine delivers a copy tracking solution that far exceeds expectations. It’s easy to use, easy to administer, and accurate.”

Jackson Ng  
 Director of Technology  
 BAR Architects

## Integrated Cost Recovery for Walkup Devices

Argos Copy Tracking, from Sepialine, delivers tracking and enforcement for your copier and scan equipment. By extending the award-winning Argos Platform to your copy equipment, you’ll get all the power and flexibility of Argos Print Tracking. With support for Windows, Macintosh, CAD and Novell, Argos has become the AEC standard for cost recovery.

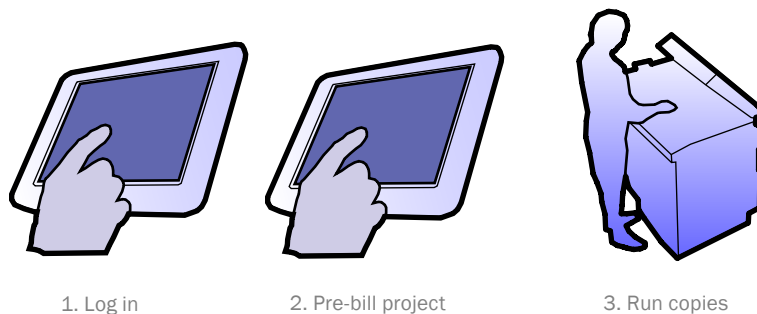

## Features and Benefits

- Software-based solution is easy to manage and customize
- Centralized management console lets you take terminals and copiers online and offline without visiting each copier
- Flexible workflow lets you assign projects at the copier, or back at the desktop
- Argos Copy Control Unit is separate from the terminal, so cabling and hardware is concealed
- Wide variety of terminal options available
- As part of the Argos Platform, all logging, projects and policies are shared with your Argos print tracking system
- Drive multiple copiers from a single terminal. Save space and save money.
- Fully customizable user interface lets you set colors, labels - even add your company logo
- Users can log in by numeric code, or by network username and password

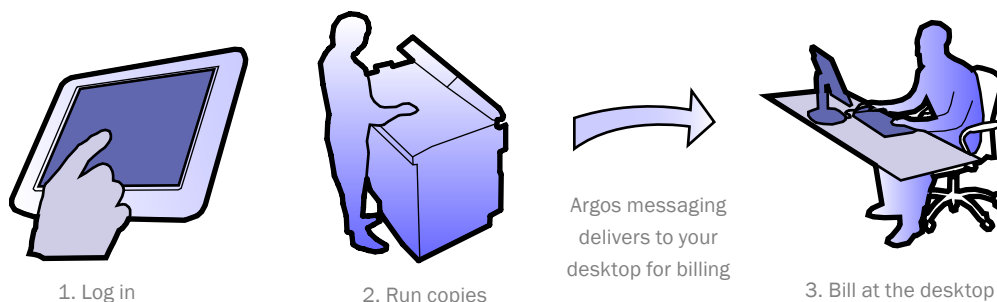

## Sepialine Revolutionizes Workflow - Again

With Argos Copy Tracking, Sepialine updates how you think about copy tracking. Instead of the traditional calculator-like devices that make copy tracking a challenge for users, Argos Copy Tracking works with an easy-to-use touch screen computer. Sepialine's software-based solution integrates directly into your Argos Cost Recovery database, using the same projects, users and policies found in your Argos print tracking system. Argos Copy Tracking delivers flexible workflow, so that your users can get their work done - quickly and easily.

**Classic Mode** is similar to traditional copy tracking solutions: users pre-bill copying before using equipment. Argos Copy Tracking software makes it easy to log in and search projects.

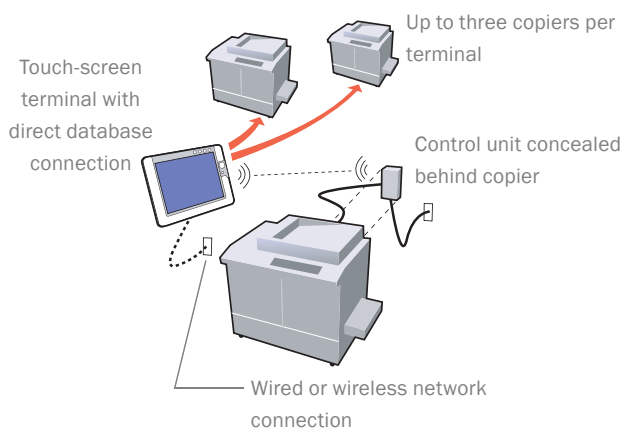

**Desktop Mode** only requires users to identify themselves. Unbilled copying is routed to the user's desktop for billing with the Argos popup dialog.

## Terminals

Argos Copy Tracking terminals feature a touch screen, small footprint, light weight and a sophisticated interface. With support for up to three copiers per terminal, you can use Argos Copy Tracking for high volume installations, remote convenience copiers and everything in between.

With built-in wireless networking, the Argos Copy Tracking terminal only requires a thin power cord for a clean, simple installation.

## About Sepialine

Sepialine, Inc. delivers products and services to capture, analyze and report expenses across the enterprise. The award-winning Argos Cost Recovery Platform from Sepialine delivers print, copy, scan and fax tracking for corporate and service professionals, worldwide, including architecture, engineering, legal and reprographics industries.
