

Argos Print Tracking

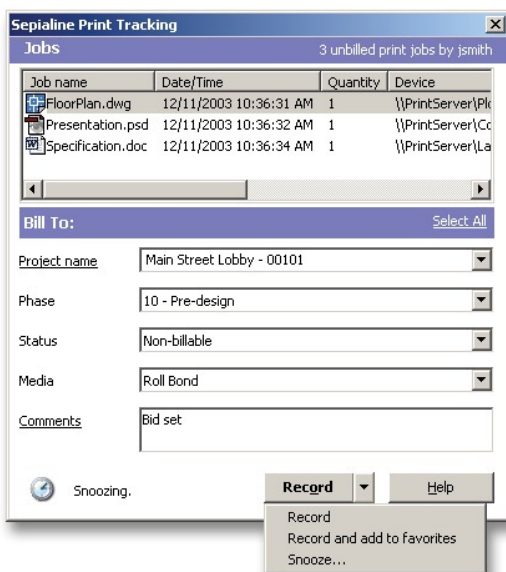

“Before adopting Sepialine, we had a huge hole in our reimbursables. With Sepialine print tracking, we were able to close the gap completely.”

Brian Darrow, PE
 President
 The Blueline Group

Sepialine - The Leader in Cost Recovery

Your business depends on getting the most from your investments. Every time you print, plot or make a copy, if you're not tracking and billing those expenses, you're sending money out the door. Which is why Sepialine developed the Argos Cost Recovery Platform. Gone are the days of chalking up office expenses to overhead; with Sepialine software, expenses become profit.

As the leading Cost Recovery solution for service professionals, Sepialine software is used by the world's leading companies to capture, analyze and report expenses—and ultimately—to improve the bottom line.

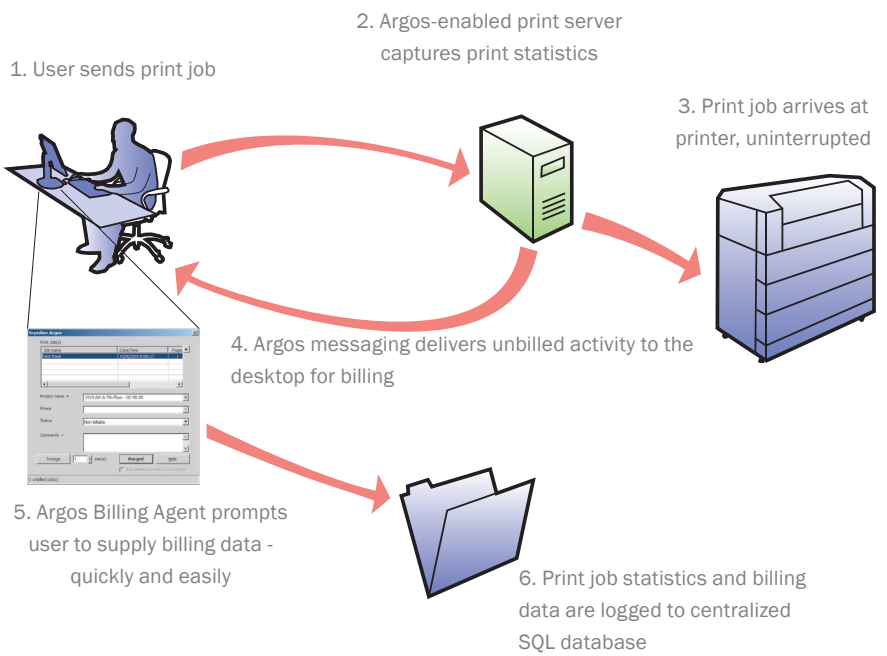

Features and Benefits

- True server-based tracking for flexibility, stability and easy maintenance
- No application-specific plug-ins required
- Silently track some or all users without any desktop installation
- Preserves workflow: print jobs are not stopped or held
- Quota-based enforcement with configurable deferred billing
- Batch-print compatible
- Simple desktop software that isn't responsible for print tracking - only billing
- Single point of maintenance
- Automatically tracks new printers as they are installed
- New network printers are automatically tracked
- Customizable reports based on industry-standard Crystal Reports
- Built-in integration imports projects from most popular accounting software packages
- Built on enterprise grade Microsoft SQL Server database
- Runs on your existing infrastructure - no dedicated server required

It's All About Workflow

Sepialine software is built on the innovative Argos Cost Recovery Platform. While most cost recovery products are built to stop users until they bill their expenses, Argos takes a different approach. Configurable quotas allow users to get their work done first. Users can bill their printing, plotting and copying at their convenience, or when they reach quota.

This simple distinction is only possible with the enterprise-grade Argos Platform—and it means the difference between users who try to break or cheat the system, and productive employees supplying accurate data.

Built to Grow With You

The Argos Cost Recovery Platform is more than bells and whistles: the Platform makes it easy to integrate with your existing business software. Sepialine offers support for a variety of popular products. And the Argos Platform is about more than just Windows print tracking. Extend the Argos platform with these powerful tools:

| | |
|----------------------------|--|
| Argos Copy Tracking | Brings the Argos Platform to your walkup copiers for the ultimate in control and accuracy. |
| Argos for Macintosh | Track Mac OS 9 and OS 10. with the same award-winning features found in Argos for Windows |
| Argos for NetWare | Take rock-solid Argos print tracking to your Novell network. |
| Argos Data Exchange | Connect the Argos Platform to nearly anything with the flexible integration framework from Sepialine |
| Argos SDK | Customize the Argos Platform to meet your company's specific needs with the Argos Software Development Kit (SDK) |
